```
在 Git 中打标签非常简单,首先,切换到需要打标签的分支上:
admin@zebin MINGW64 /d/BlueTestTry/bluetooth (master)
$ git checkout master
Already on 'master'
Your branch is up to date with 'origin/master'.
然后. 敲命令git tag <name>就可以打一个新标签:
admin@zebin MINGW64 /d/BlueTestTry/bluetooth (master)
$ git tag gao-finish-1.0
admin@zebin MINGW64 /d/BlueTestTry/bluetooth (master)
$ git tag
gao-finish-1.0
比方说要对add merge这次提交打标签,它对应的commit id是a79dd8e,
敲入命令
admin@zebin MINGW64 /d/BlueTestTry/bluetooth (master)
$ git tag gao-finish-0.9 a79dd8e
admin@zebin MINGW64 /d/BlueTestTry/bluetooth (master)
$ git tag
gao-finish-0.9
gao-finish-1.0
默认标签是打在最新提交的 commit 上的。注意,标签不是按时间顺序
列出,而是按字母排序的。可以用 git show <tagname>查看标签信息:
admin@zebin MINGW64 /d/BlueTestTry/bluetooth (master)
$ git show gao-finish-1.0
commit 50f468b14de423a86eac3519d12a33ee4a62bd8a (HEAD -> master, tag: gao-
finish-1.0, origin/master, origin/HEAD)
```

Merge: a79dd8e eafec06

Merge branch 'dev'
delete test.txt

Author: zebin_gao <zebin_gao@betonetech.com>

Date: Thu Jun 26 14:00:57 2025 +0800

因为创建的标签都只存储在本地,不会自动推送到远程。所以,打错 的标签可以在本地安全删除。

如果要推送某个标签到远程,使用命令 git push origin <tagname>:

```
admin@zebin MINGW64 /d/BlueTestTry/bluetooth (master)
```

\$ git push origin gao-finish-1.0

Total 0 (delta 0), reused 0 (delta 0)

To github.com:ZebinGao/bluetooth.git

* [new tag]

gao-finish-1.0 -> gao-finish-1.0

或者,一次性推送全部尚未推送到远程的本地标签:

admin@zebin MINGW64 /d/BlueTestTry/bluetooth (master)

\$ git push origin --tags

Total 0 (delta 0), reused 0 (delta 0)

To github.com:ZebinGao/bluetooth.git

* [new tag] gao-finish-0.9 -> gao-finish-0.9

- 命令 git push origin <tagname>可以推送一个本地标签;
- 命令 git push origin --tags 可以推送全部未推送过的本地标签;
- 命令 git tag -d <tagname>可以删除一个本地标签;
- 命令 git push origin :refs/tags/<tagname>可以删除一个远程标签。
